

Miss Berg

Waranga Chronicle

29 August, 1872

Diphtheria, a disease so destructive for young children, has again made its appearance in this district.

Up to the present time only one case has been reported, but that one proved fatal. Mr Berg's eldest daughter, aged ten years, was attacked at the end of the week, and although everything was done for the sufferer in endeavouring to stay the malady, she rapidly became worse, and expired on Monday evening.

The funeral took place yesterday.
